

## Tbrush

Manual\_Tbrush\_EN\_2301

TB140-180

**EC DECLARATION OF CONFORMITY CONCERNING MACHINES**  
According to Directive 2006/42/EG, annex 2, point 1, A

GKB Machines B.V.  
Middelweg 1  
2992 SP Barendrecht  
Nederland

hereby declares that the

GKB Tbrush

Type: TB140 - TB180

to which this declaration relates are in conformity with the provisions of:

- Directive 2006/42/EC Machinery Directive

At Barendrecht, 31/01/2023

T.J.W. Kraaijeveld

## UKCA DECLARATION OF CONFORMITY CONCERNING MACHINES

According to Machinery (Safety) Regulations 2008

Manufacturer:  
GKB Machines B.V.  
Middelweg 1  
2992 SP Barendrecht  
Nederland

UKCA Delegate  
GKB Machines Ltd.  
Warwick House, Ermine Buseniss Park, Spitfire Close  
Huntingdon PE29 6XY  
United Kingdom

hereby declares that the

**GKB Tbrush**

Type: TB140 - TB180

to which this declaration relates are in conformity with the provisions of:

- Machinery (Safety) Regulations 2008

At Barendrecht, 31/01/2023

T.J.W. Kraaijeveld

## 1. FOREWORD

The information contained within these operating instructions covers the necessary use, safety, operation, and maintenance of the machines mentioned in the CE declaration. Before operating anyone of the machinery has to read this operating manual in its entirety. The manufacturer will not be held liable for an injury or damage which occurs from improper use.

It is the goal of the manufacturer to create excellent products, therefore we hold the right to make changes at any time and will not be held under obligation to previously delivered machines. Certain aspects, such as weight and dimensions, may change at any time without notice. Images are also not bound to interim changes.

All rights reserved.

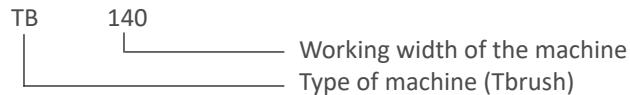

## 2. INTRODUCTION

The Tbrush is designed to easily brush artificial grass fields. Regular brushing repairs drainage issues and keeps the sports technical attributes in perfect shape. The infill material is worked upwards using brush bars, after which it is equally distributed across the field. Due to the compact size and its relative light weight, this brush is very mobile. The Tbrush comprises transport wheels and a drag chain by default.

Every machine is marked with a code, as seen in the image below.

Example:

Model 'TB140':

The manufacturer shall not be held liable for any damage resulting from unintentional use.

## 3. CONTACT

Manufacturer:

GKB Machines B.V.  
Middelweg 1  
2992 SP Barendrecht

[www.gkbmachines.com](http://www.gkbmachines.com)

Productnumber Manual: See footer/ front page

Your personal Dealer:

Your GKB dealer:

## 4. WARRANTY

The statutory warranty period of two years from the invoice date applies to the machines. Warranty repairs or product replacements do not extend the warranty period of the machine or parts. The guarantee does not apply to items arising from normal wear and tear or ageing.

A warranty procedure starts with an investigation to determine whether the problem is covered by the warranty. Your cooperation is required to verify that the warranty conditions have been met. To this end, keep a record of the maintenance and repairs carried out in a maintenance logbook.

If the manufacturer receives a warranty notification, it will be determined whether the defect is covered by the warranty. If this is the case, a suitable solution will be found in consultation with the customer. In all cases, consult with the dealer before you try to solve the problem yourself. Warranty can only be given if the machine is in its original condition.

The manufacturer's written permission is required to ensure that the machine does not deviate in any way from the aforementioned purpose of use. Use other than as described will lead to the loss of product liability and warranty.

Product liability obliges the manufacturer and the dealer, when selling machines, to provide a manual and to instruct the user on the operating, safety and maintenance instructions.

The manufacturer is not responsible for any (unintended) damages to grass or sport fields.

**Caution!** The operating instructions must also be supplied if the machine is subsequently exchanged or resold by the user. Also inform the new user of the regulations.

## 5. SAFETY

### 5.1. General

The safest operation requires these machines are operated exactly according to these instructions. In addition, there are also safety warnings on the machines to warn of potential dangers and instructions on how to handle them. The only way to 100% guarantee no property damage or personal injury occurs is to follow these instructions. While using this machine, keep this handbook nearby and always ensure that safety markings on the machines are visible.

Any local safety regulations, including road traffic regulations, must be observed at all times.

The warranty, CE marking, and product liability automatically expire upon changes being made to the machine without consultation of the manufacturer.

The machine is equipped with several safety stickers, to instruct the user how to handle the machine with care. An example of a safety sticker is shown next.

Annex III describes every type of safety sticker. Read them carefully before using the machine.

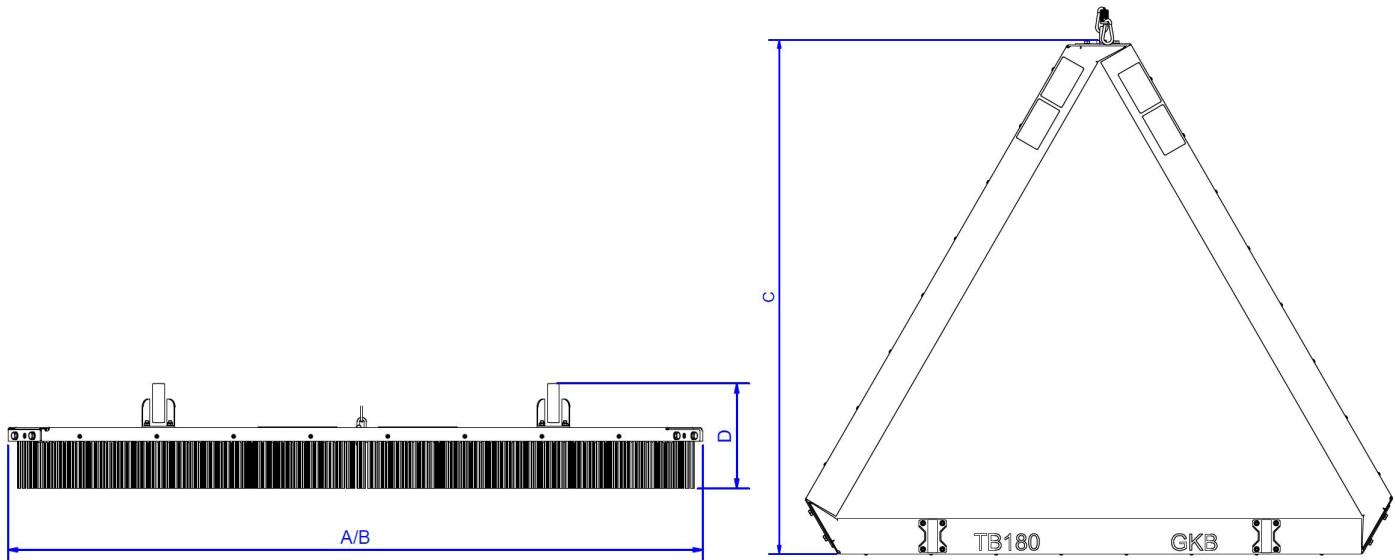

## 5.2. Safety instructions

1. These operating instructions must be read and understand by everyone who works, checks or maintains the machine in order to avoid risks and to avert dangers.
2. Pass on all safety and operating instructions to all users.
3. The machine may only be used for the intended work.
4. For optimum performance, the surface to be worked on must be flat and free of obstacles.
5. Only use parts and accessories specified by GKB. The installation and/or use of non-original parts and accessories may change or impair the specific characteristics of the machine. GKB is excluded from any liability for damage resulting from the use of non-original parts and accessories.
6. Before working with the machine, it is necessary to become familiar with all control components, their functions, safety aspects and risks. The machine may therefore only be operated and maintained by qualified personnel.
7. Maintenance must be carried out in accordance with the instructions in the manual. The maintenance carried out must be recorded. Never come under the machine in any situation!
8. Before commissioning, the safety of operation and transport must be checked. The inspection includes, but is not limited to, the correct functioning of the mechanical, hydraulic and electrical components.
9. If leaks are suspected, stop the entire hydraulic system and allow it to cool down before carrying out maintenance.
10. Before use, check that there are no persons and/or obstacles within the working area of the tractor and the machine.
11. There are several warning labels on the machine. These stickers contain important instructions for safe use and must always be clean and visible.
12. All safety devices must be attached to the machinery and be in good working order. Timely replacement of worn and damaged protective equipment is required. This also applies to the warning labels. Fixed guards must always be present during operation.
13. The operator's clothing must be close-fitting. If necessary, wear head and hearing protection.
14. Driving on the machine during work and transport is not permitted.
15. When using the machine on public roads, the (local) traffic regulations of the respective country apply. Observe the markings, lighting and safety devices applied. Only drive if all required permits and approvals have been obtained.
16. Maintain an adjusted speed when the machine is hanging behind the tractor. Especially when driving over thresholds or poor road conditions. Always place the toplink in the round hole!
17. The driver is responsible for ensuring that the tractor and the machine are on public roads in accordance with the regulations. Permitted axle loads and weights must be considered.
18. If the driver is unable to oversee the carriageway immediately behind him, he must be instructed when reversing. Instructors must be within the driver's field of vision only and never between the tractor and the machine.
19. Connect the machine with the tractor according prescribed tools.
20. When connecting and disconnecting, parking or storing the machine, it must be prevented that the machine moves unintentionally. Depending on the machine, this can be prevented by applying the brakes, using the parking position or locking the wheels by placing wedges.
21. During use, transport or storage on a sloping slope or during maintenance, one should be aware of the risk of tipping over.
22. Prevent burns by careful use of hot components such as oil lines and engines. When carrying out maintenance work, allow the system to cool down completely.
23. It is not allowed to drive or maintain the machine under the influence of medication, drugs or alcohol.
24. Using headphones or hearing protection with music or radio is not permitted.
25. Smoking and open fire is prohibited in and around the machine.

### 5.3. Product specifications Tbrush

	Unit	TB140	TB180
<b>Dimensions</b>			
Working width A	cm	140	180
Total width B	cm	150	200
Length C	cm	120	160
Height D	cm	30	30
<b>General specifications</b>			
Working depth	cm	0-2	0-2
Empty weight	kg	40	70
<b>Specifications towing vehicle</b>			
Power	pk	10-35	15-45

## 6. CONSTRUCTION OF THE TBRUSH

A Tbrush has many different components and parts. This chapter will describe each of them.

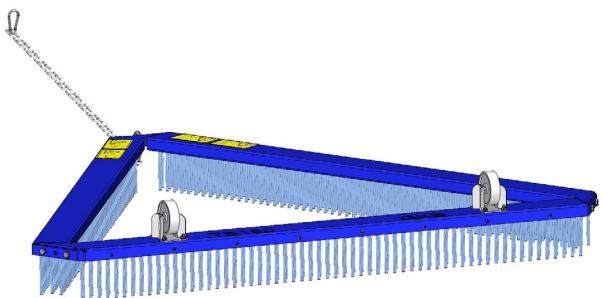

### 6.1. The frame

The frame of the Tbrush comprises of three different parts. These are connected to each other using bolt connections. Plastic brush bars are mounted in the different frames.

Two support wheels are mounted on the brush frame. By folding the frame it is possible to ride the brush frame to a different location. The Tbrush is connected to the towing vehicle using a drag chain. As such, the towing window is suitable for any type of towing vehicle.

### 6.2. The result

The result is a brushed field, where potential drainage issues have been repaired. Moreover, the sports technical attributes are optimized so that the field feels as new.

## 7. OPERATION TBRUSH

### 7.1. Connecting and disconnecting the machine

The following steps describe how to connect and disconnect the Tbrush.

**Connecting:**

1	Make sure that the tractor and machine are placed horizontal;	
2	Connect the towing chain of the Tbrush with the towing eye of the tractor.	
 See riskanalysis: Chain/ machineframe		

**Disconnecting:**

1	Make sure that the tractor and machine are placed horizontal;  Make sure that the machine is free of infill material before leaving the field.	
2	Move the tractor a bit backwards to loosen the chain;  Always make sure that the machine can't move and is switched off.  Remove the towing chain and move the tractor away.	
 See riskanalysis: Chain/ machineframe		

## 7.2. Start with brushing

1	Drive the combination to the right location. Position the Tbrush with hairs to the bottom side.  <i>Always ensure that the machine can't move and is switched off.</i>	
2	Start driving and brush for a couple meters.  Take wide turns to prevent damage to the field.	
3	Stop brushing and stop the machine. Check if the desired depth is reached and if the entire surface is brushed equally. If not, change the driving speed of the tractor.  <i>Pay attention, never come under the machine!</i>	

 See riskanalysis: Chain/ machineframe

## 7.3. Transport and storage

### Transport:

When transporting the machine, a suitable means of transport must be selected. Make sure that the machine is secured against rolling away and tipping over. If you don't have sufficient knowledge for a transport, carry it out by a specialised transport company. Provide at least four attachment points on the transporting vehicle.

### Storage:

The following points must be taken care when storing the machine:

1. Before storage, clean the machine in such a way that no sand or other impurities are left behind;
2. Store the machine at a dry place;
3. Check if the machine is positioned right with the support legs or place wheel chocks in front and behind the wheels;
4. Never put the machine away on the brake (if applicable);
5. Empty the tanks of the machine if they are filled with water;
6. To prevent corrosion of uncoated parts, apply a protective oil layer;

If the machine is to be used again after storage, all maintenance points must be gone through. Before use, make sure that all components are working properly.

### Lifting:

There are fastening eyes provided at the machine for safe lifting. It's recommended to hoist the machine with lifting straps. Use at least two straps in all cases. The lifting points are indicated in the figure. Before lifting, make sure that the machine is free from loose materials like seeds or infill materials etc.

## 8. MAINTENANCE

### 8.1. Maintenance schedule

To maintain machine quality, adhere to the following diagram. The list of spare parts will show the correct parts to replace. See chapter 7.3 for safe execution of the maintenance points.

*Always ensure that the machine is switched off, cannot move and has cooled down completely.*

*Always make sure that wearing parts are in a good condition and free from broken parts or deformation. Replace if desired.*

		Operating hours					
		Before use	50 h	250 h	500 h	1000 h	Annually
General	Outside cleaning of the machine	x					
	Check if all safety stickers are on the machine	x					
	Check for oil stains/ traces	x					
Others	Check locking pins		x				
	Tighten bolted connections of rotating parts			x			
	Tighten bolted connections of fixed parts				x		

## 9. FAILURES

If a failure is detected, please go through the following points before contacting your dealer.

<i>Symptom</i>	<i>Cause</i>	<i>Solution</i>
The result isn't equal	The driving speed is too high	Decrease the driving speed
	Inequalities in the field	The material is stick to the ground or the field is not equal

## 10. END OF LIFE

To dispose of a machine, follow all local regulations. Practice appropriate safety measures.

Follow these steps:

1. Decommission the machine and shut it down hydraulically;
2. Drain and recycle all consumables;
3. Dispose of the machine in accordance with the local regulations.

## ANNEX I TIGHTENING TORQUE

When tightening bolts, observe the following maximum torques (ISO898/1).

The following types of bolts are used in the machine:

- Bolts for wear parts (chisels, etc.): 10.9
- Other bolts: 8.8

**Tightening torque [Nm]**

Metric	Bolt strength:	8.8	10.9
	M5	6	8,5
	M6	10,3	14,7
	M8	25,5	35,3
	M10	50	70,6
	M12	87,3	122,6
	M14	138,3	194,2
	M16	210,8	299,1
	M20	411,9	578,6
	M24	711	1000

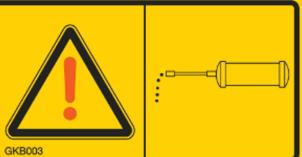

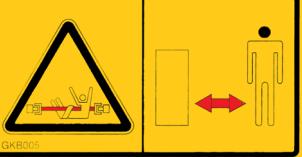

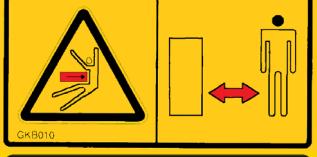

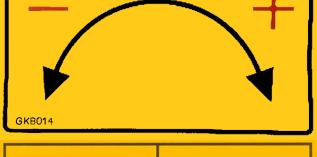

## ANNEX II RISK ANALYSIS

Based on risk analyses, measures were taken during the development of the machines to ensure the safety of users and bystanders. These results include, but are not limited to, the following measures:

Item	Risk	When	Risk reduction
Chain	Crushing injuries in between the chain and machine frame	If a person connects the chain	Safety stickers placed Safety instructions in manual
Machine environment	Being run over by the machine and/or tractor, resulting in serious injury	If the person is between the machine and the tractor and the combination is moving (unintentionally)	Safety stickers placed Safety instructions in manual
		During transport on public roads.	
	Be knocked down by the machine, resulting in crushing injuries	If the person is next to the machine.	Safety stickers placed Safety instructions in manual
		If the person is on a slope next to the machine.	
	Breathing difficulties	Danger of breathing difficulties due to dust generation during use of the machine	

## ANNEX III SAFETY STICKERS

To promote safe practices and proper handling reminders, safety stickers are adhered to all machines. If a sticker cannot be read or found, it should be replaced immediately. The following page shows an overview of all the stickers and their positions.

GKB001	<i>Comply with all maintenance instructions</i>		GKB002	<i>Refer to the owner's manual. It contains useful information about the use, safety and maintenance</i>	
GKB003	<i>Regular lubrication</i>		GKB004	<i>Switch off the power take-off before lifting the implement</i>	
GKB005	<i>Risk of retraction due to rotating parts</i>		GKB006	<i>Risk of finger cutting due to rotating parts</i>	
GKB007	<i>Danger of rotating parts</i>		GKB008	<i>Risk of retraction due to rotating parts</i>	
GKB009	<i>Risk of crushing</i>		GKB010	<i>Keeps distance when the machine is in operation due to swinging parts</i>	
GKB011	<i>Keep a distance when the machine is in operation due to flying parts.</i>		GKB012	<i>Risk of crushing between tractor and implement</i>	
GKB013	<i>Danger of retraction when opening the cover when the rotor is switched on</i>		GKB014	<i>Choice in minimum to maximum adjustment</i>	
GKB015	<i>Danger of retraction due to rotating parts</i>		GKB	<i>Place a safety piece before entering the danger zone</i>	
HOT	<i>Keep a safe distance from hot surfaces</i>		018417	<i>Required speed</i>	

### Location safetystickers
