

GREEN WORKZ PTY LTD

polywet

POLYWET BREAK is a high quality thatch and soil penetrant surfactant blend, specifically designed to quickly and efficiently move water away from the foliage and thatch and into the growing medium.

KEY FEATURES

- Breaks surface tension and unlocks nutrients and trace elements in the soil profile.
- Humic acid aids in nutrient uptake.
- Concentrated penetrant surfactant optimising irrigation efficiency.
- Non-burn formulation, minimal interaction with the plant's cuticle.

APPLICATION RATES

Injection: 2 - 5L/Ha. To ensure optimal water usage, apply monthly or as necessary. The greater the frequency of application the greater the water use efficiency.

Boom Spray: 5L/Ha. Apply in no less than 600L/ha and up to 1000L/Ha of water. Irrigation is not critical but is recommended to ensure product effectiveness. Repeat treatments in 14 to 28 days.

POLYWET DRIVE is a high quality thatch and soil penetrant surfactant blend, specifically designed to quickly and efficiently move water away from the foliage and thatch and into the growing medium.

POLYWET DRIVE is economical and ideal for injection into irrigation systems or application via boom spray for large area usage.

KEY FEATURES

- Concentrated penetrant surfactant optimising irrigation efficiency.
- Non-burn formulation, minimal interaction with the plant's cuticle.
- Significantly reduces run-off on sloped areas.
- Increases fertiliser efficiency.
- Moves chemical inputs into the soil more uniformly to maximise performance.
- Better turf performance and ability to handle traffic.

APPLICATION RATES

Injection: 2 - 5L/Ha. To ensure optimal water usage, apply monthly or as necessary. The greater the frequency of application the greater the water use efficiency.

Boom Spray: 5L/Ha. Apply in 600 - 1000L/Ha of water. Irrigation is not critical but is recommended to ensure product effectiveness. Repeat treatments in 14 to 28 days.

Fertiliser and Pesticide Placement: 2L/Ha. To ensure optimal placement of soil targeted pesticides and fertilisers tank mix Polywet Drive. Irrigation is not critical but is recommended to ensure product effectiveness.

POLYWET HOLD is a long-term surfactant that gives you guaranteed safe protection against water repellence problems and promotes turf uniformity for up to 60 days.

POLYWET HOLD is a 100% non-ionic, residual surfactant formulation for long term prevention of localised dry spot occurrence.

KEY FEATURES

- Breaks surface tension and unlocks nutrients and trace elements in the soil profile.
- Non-burn formulation, minimal interaction with the plant's cuticle.

APPLICATION RATES

Preventative application of localised dry spot in sportsfields and golf courses including greens.

20 - 40L/Ha in 600 - 1000L/Ha of water.

Irrigation is not critical but is recommended to ensure product effectiveness.

Repeat treatments in 30 to 45 days.

POLYWET FLUSH is a liquid anionic soil-amending additive, which modifies surface tension of the bound water in the soil profile.

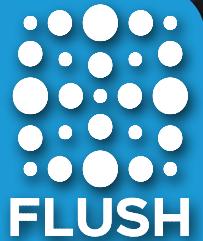

KEY FEATURES

- Dramatically increases water infiltration and penetration on hydrophobic sand, but particularly effective on loam and clays.
- Enhances soil aeration and eliminates wet spots.
- Ideal for use in winter months where heavy rainfall causes over saturation of soil profiles.
- Highly tank mix flexible.
- Low use rates, allowing for economical treatment of broadacre areas.
- Formulated in Australia, specifically for turf management situations.

APPLICATION RATES

Soil Treatment - Turf Improved Infiltration: 1.5L - 2L/Ha in 750-1000L of water per Ha.

Apply to growing mediums on golf greens, tees and surrounds, bowling greens, tennis courts, fine cut fairways, racetracks and sports fields.

POLYWET FAIRWAY FLUSH is a superior penetrant designed to move excess water through the soil profile. The added benefit of humic acid aids the ability to unlock nutrients in the soil making them available for immediate plant uptake.

KEY FEATURES

- Infiltration and water movement.
- Increases nutrient availability
- Increases oxygen in the soil profile
- Increases exchange capacity
- Formulated in Australia, specifically for turf management situations.

APPLICATION RATES

Soil Treatment - Turf Improved Infiltration: 1.5L - 2L/Ha in 750-1000L of water per Ha.

Apply to growing mediums on golf greens, tees and surrounds, bowling greens, tennis courts, fine cut fairways, racetracks and sports fields.
