PRO Z

## ALPHA

**23 - 2 - 13 + Fe & 50% CRN**

PRO Z ALPHA is a high quality 50% controlled release fertiliser that is ideal for maintenance applications or when sustained growth and plant conditioning is required. Contains 2.5% Fe for rapid green-up.

PRO Z ALPHA blend is the ideal product for enhancing existing turf cover.

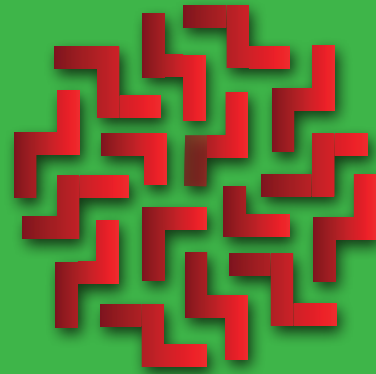

PRO Z ALPHA provides excellent colour and a high level of turf growth both initially and for a sustained period due to its 50% Controlled Release Nitrogen with added iron and manganese.

This product applied at routine intervals will provide an exceptional deep colour with excellent controlled growth patterns.

### KEY FEATURES

- A high potassium content builds strength in the plant to cope with the stresses of wear and disease pressure.
- Perfect to use as a renovation fertiliser to assist with reinvigorating the turf.
- Is ideal for use at times when immediate and sustained growth is required.
- 50% Controlled Release Nitrogen (CRN)

APPLICATION RATE: 175 - 275KG/HA

## CHARLIE

**17 - 2 - 7 + 11% S & 6% Ca**

PRO Z CHARLIE is a well balanced nutritional fertiliser that provides an effective green up without excessive N.

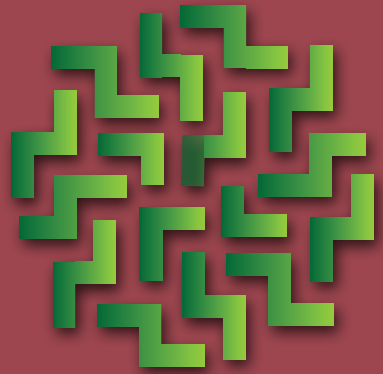

PRO Z CHARLIE'S balanced formula is specifically formulated for year round use as well as in time of establishment or renovations. It is an ideal granular fertiliser to deliver vital nutrients without excessive flushes of growth.

The inclusion of calcium and magnesium will also assist in cell development and plant strength.

### KEY FEATURES

- Fairway grade granule suitable for all turf applications even on finer turf surfaces.
- Blended with similarly soluble granules so all nutrients are evenly distributed for maximum nutrient delivery.
- Performs consistently on all varieties of turfgrass, and under all but the most severe climatic conditions.
- Apply to dry turf or foliage and irrigate thoroughly immediately after application.
- Nutritional uptake for up to 8 weeks.

APPLICATION RATE: 175 - 300KG/HA

## TANGO

### 30 - 0 - 10 + Fe & 75% CRN

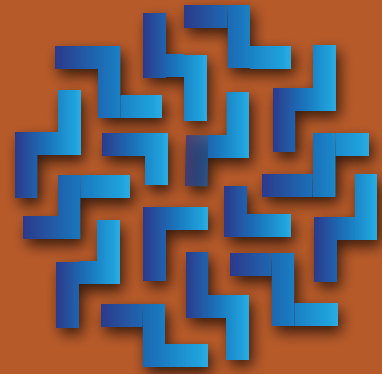

PRO Z TANGO is the ideal blend for use where excellent colour and a longer period of slow release is required. Ideal for the maintenance of high quality turf be it high or low cut, when frequent applications are not possible.

PRO Z TANGO has the highest CRN content at 75% which gives sustained, uniform growth for longer than all other PRO Z granular blends.

#### KEY FEATURES

- 25% Urea still provides up front growth and green up with 2% Fe for colour
- Is ideal for use at times when longer more sustained growth is required.
- 75% CRN gives an extended growth period

APPLICATION RATE: 175 - 275KG/HA

## UNIFORM

### 20 - 0 - 20 + Fe, Mn & 50% CRN

PRO Z UNIFORM provides a uniform balance of N : K ratio. The equal potassium to nitrogen ratio builds strength in the plant to cope with the stresses of wear, seasonal demands, and disease pressures.

PRO Z UNIFORM is ideal for managing N to K inputs throughout the growing season, in particular prior to entering the cooler months of the year leading in to winter.

50% of the nitrogen is supplied as Poly Sulphur Coated Urea giving a controlled release nitrogen content for the perfect combination of upfront and controlled release nutrition.

#### KEY FEATURES

- Uniform N : K levels for strength and resilience as well as great colour and growth.
- 50% CRN gives even growth for up to 12 weeks

APPLICATION RATE: 175 - 275KG/HA
